Speedier, safer and smarter. Efficient, ergonomic and economical. These are the main characteristics of Atlet's new family of low-level order pickers, called **Tempo**. These are trucks for pickers and companies who are searching for efficiency but not at the cost of ergonomics and safety.

Atlet's new **Tempo** low-level order picker is designed to give the picker the best possible working environment. Combine that with performance, safety and economy and the Tempo will be the automatic choice of both company and driver.

The order picker's new workplace

A picking truck is one of the highest-intensity workplaces imaginable. We confirmed this while developing the **Tempo**. This is a truck designed by order pickers for order pickers.

The **Tempo** combines outstanding performance with unique ergonomics and safety.

The order picker

- Low step height
- Generously dimensioned platform with non-slip floor
- Fitted with storage space for pens, papers etc
- Free-floating platform with safety switch
- Adjustable driving seat (option)
- Ergo steering (option)

The company

- Ergonomic solutions reduce strain on staff
- Designed to reduce maintenance costs by 15%
- Lowest life cycle cost
- Increases efficiency
- Friction-force system gives smooth running with constant wheel pressure and traction
- Prepared for connection of a terminal (option)
- Automatic download of statistics (option)

The truck

- AC motor gives a maximum speed of 12 km/h
- Unmatched acceleration
- Truck computer (ATC)
- Remote fault-detection (TRAC)
- Efficient and speedy braking system

Safety

- Integrated safety switch in the floor
- More robust bumper stands up to rough treatment
- Effective emergency brake
- The S3 safety system cuts the risk of accidents (option)

New Tempo for piecework

The Atlet Tempo is every order picker's and every company's dream. With the Tempo an order picker on a piece rate earns more money while finding himself less tired after a long day. To the company the Tempo is a sound investment, reliable and built to minimize servicing and maintenance requirements.

Quicker

The 2.2 kW AC motor gives unparalleled performance. What about 12 km/h with no load and 10 km/h loaded? The truck has lightning acceleration and fast raising and lowering of both forks and platform.

Safer

Rugged chassis, Atlet's patented S3 safety system and masses of other smart safety features. For example the platform cannot be raised and lowered without the driver on board, the PIN code prevents unauthorized use of the truck and the friction-force system gives smooth driving.

Good-looking

Compact, rounded design with no unnecessary projecting details. The design is not just for appearance. This is a truck made to deal with both heavy loads (2500 kg in the heavy-duty version) and extreme conditions (from -35°C to $+40^{\circ}\text{C}$).

Efficient

Performance and ergonomics give an efficient truck. Order pickers can work faster with the Tempo without getting tired.

Ergonomic

Extra spacious driving platform with comfortable adjustable seat and backrest, storage space for paper and pens etc. All correctly located, easily reached to give the best working position.

The steering is progressive – a 70° angle on the Ergo steering gives a 90° turn of the wheels. Atlet's new Ergo steering is an optional extra.

Atlet's ergonomic tiller arm is standard on all models. The new Ergo steering handle is available as an option.

The Tempo is also planned for driver convenience. Cleverly positioned holders for writing pad, pens and other items. Simple but much appreciated.

Effective

The Tempo is built to meet the needs and demands of the picker's daily work. Although robust, its slender dimensions make it effective in tight picking aisles.

To be able to keep up the pace during a long day of starts, stops and rapid acceleration the Tempo has a battery that gives full value up to the last minute (choice of 300–600 AH, 24 V).

The difference is in the details

- Extra spacious driving platform (790 x 449 mm)
- Low step height (123 mm on PPL and PPF and 146 mm on PPC and PPD)
- Less risk of foot injury (55 mm clearance)
- Quick and simple adjustment of fork and platform height on PPC and PPD for comfortable working position.
- Prepared for connection of terminal.
- Powerful AC motor (2.2 kW) gives smooth, steady driving with high top speed and rapid acceleration.
- Robust chassis with reinforced bumper.
- Possible to stand on top of chassis.
- Simple, powerful design and technology cuts life cycle cost (LCC).
- Atlet's splendid tiller arm is standard. Ergo steering is optional.

Ergo steering

Atlet's new steering module – Ergo steering – has been developed to meet the particular needs of the order picker. The driver can control all the truck's functions from the telescopic handle. Accelerator, brake, up and down. It is also possible to drive the truck while walking beside it. The steering is ergonomically designed to keep movements to a minimum. The motor-bike-type handle gives the driver full control of balance and truck at all times.

The steering of the future is here. Atlet's new Ergo steering handle controls all the functions from one place. The handle is designed to reduce movement and therefore minimize the strain on the driver.

Technical solutions

Friction Force. For smoothest operation. The friction-force system means that the drive wheel always exerts optimum pressure on the surface, neither too much nor too little. This reduces wear on wheels and floor and gives smooth, steady running.

ATC – Atlet Truck Computer. The brain of the truck. Personal PIN code to prevent unauthorized persons from using the machine, personal settings (speed, acceleration etc.), tracing facility (the last 30 users are logged), automatic fault detection and reporting etc.

TRAC – Truck Remote Access. Remote servicing. The truck stops and you can't find a fault. Phone Atlet's emergency centre. Connect the phone to the truck and you will be told quickly and simply what is wrong with the truck and what to do about it.

1. Can't find the fault.

2. Phone Atlet service.

3. Connect the mobile phone to the truck.

4. Truck connected.

5. Fault corrected.

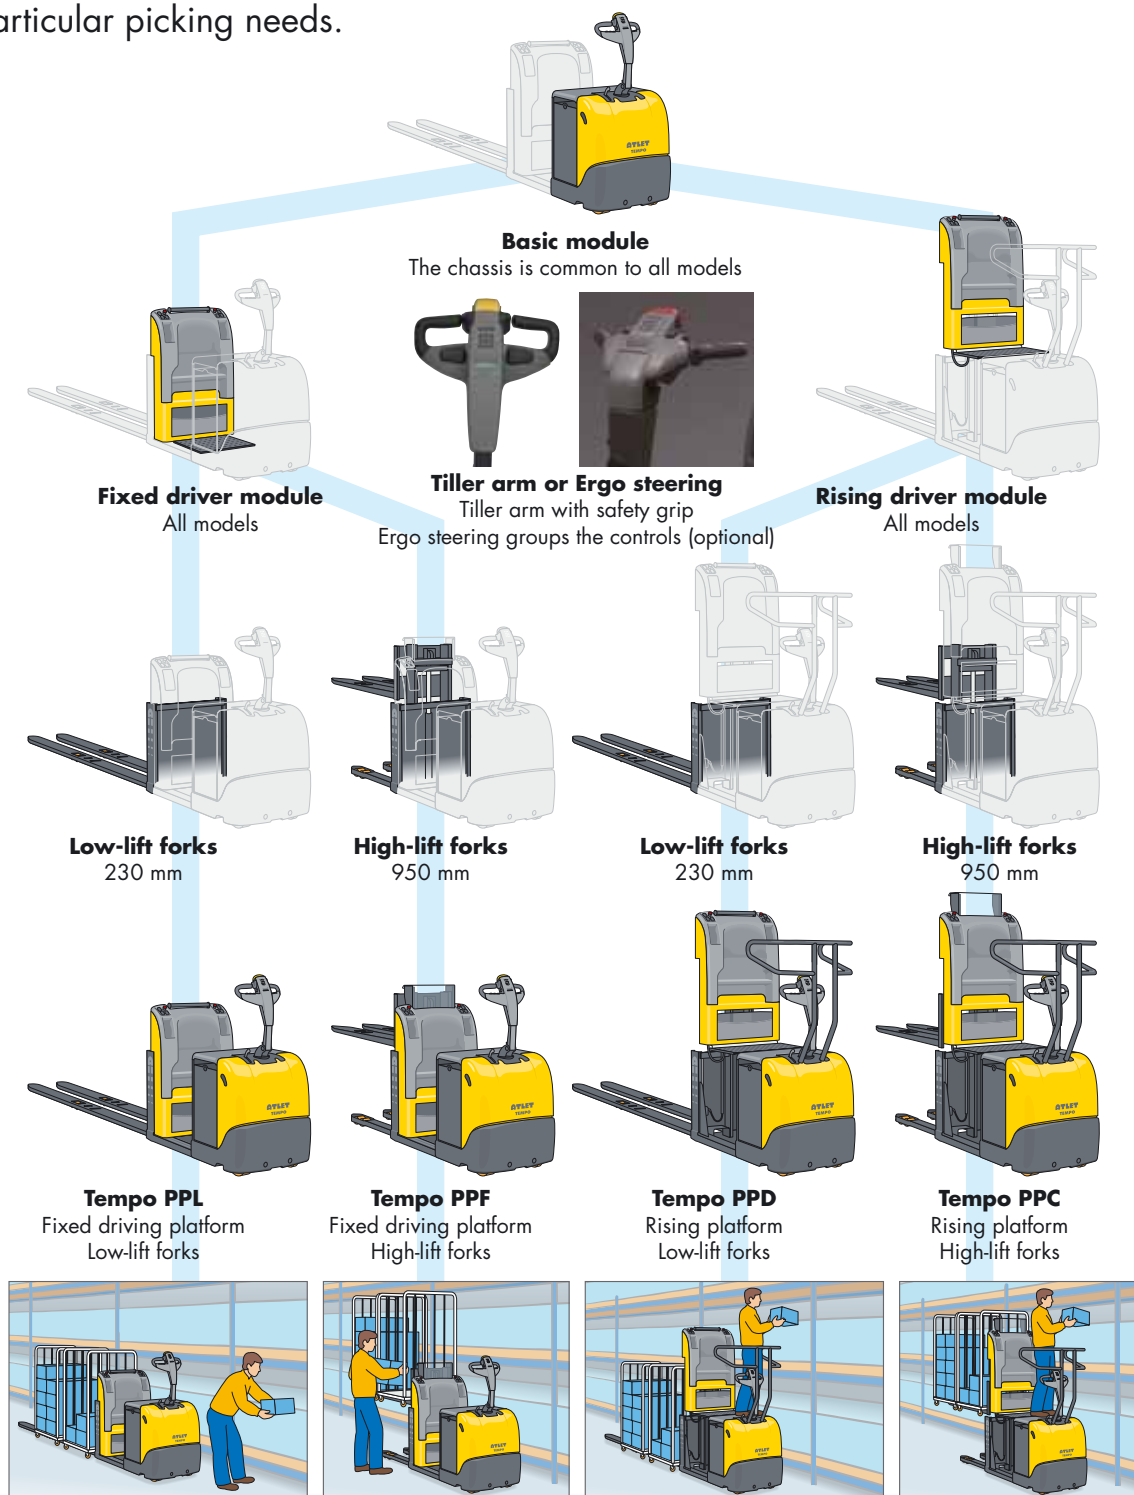

S3 (Optional). Stability Support System. S3 helps the driver to avoid hazardous situations by reducing speed on tight turns, preventing tipping and giving smoother, energy-saving driving.

Operations monitoring (optional). The truck's built-in loss adjuster. Makes it possible to monitor collisions, degree of utilization etc. When starting the driver has to report any damage to the truck before it can be driven on full power.

Modular Tempo

Atlet builds trucks to a modular concept. This makes it possible to tailor every truck to the customer's particular wishes and to keep service and LCC costs down. You can put together a Tempo for yourself from levels 1 and 2 to meet your particular picking needs.

The driving position has storage space for pens, papers and other items for maximum driver comfort.

The driver is the most important part of the truck. The Tempo offers extra space and extra equipment as standard.

Ground clearance of 55 mm reduces the risk of foot injury.

The Tempo has compact dimensions but is a willing workhorse. The Tempo improves efficiency without exhausting the driver.

You are safe with Atlet

The Tempo family lives up to the Atlet slogan "You are safe with Atlet", comprising safe driving, safe solutions and safe operation.

Safe driving

- Generously dimensioned platform
- Low step height
- Driving platform with vibration damping
- Equipped with holder for pens, drink etc
- Smooth simple steering requires minimal movement
- Cushioned lifting and lowering movements with little jerking

Safe solutions

- Friction force gives stability
- Maintenance costs reduced by approx. 15 %
- Lowest life cycle cost (LCC)
- AC motor for economy, ergonomics and safety
- TRAC – Truck Remote Access – for simple troubleshooting
- Prepared for connection of terminal

Safe operation

- High top speed
- Rapid acceleration
- Robust chassis
- Durable built-in bumper
- High battery capacity, 600 Ah
- Ergonomically designed tiller arm with truck computer
